REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance.

On one hand, Examiner disagrees with some arguments of Declaration (sections 6, 8) and Remarks, filed 04/08/2006, regarding

non-separable (permanent) and separable connections (for example, Electronic Connector Handbook, McGraw-Hill, ch.6, 7);

an interpretation of clamping in the rejection (gripping, firm support is provided by conductive element 34 with the insulating element 36 as a secondary means).

Examiner submits that the rejections based on 102 and 103 approach deems to be correct.

On the other hand, Examiner agrees with the Declaration statements (sections 3-5, 10-12) that claim 1 should be considered as a structural solution to the problem of the wicking of lubricating oil along lead wires. Hence, Examiner interpreted "means for clamping" in light of the all respective structural limitations in the specification to invoke 35 U.S.C. 112, sixth paragraph. Claims 1-7 are allowed.

No prior art has been found to anticipate or render obvious the presently claimed subject matter. Specifically, none of the prior art of record discloses the combination of the limitations presented including the clamping structural features being incorporated into the seal fitting for connecting a thermocouple (TC) or resistance temperature detector (RTC) to a lead wire from a sensor

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
